The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 16-17, and 19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In claim 16, the disclosure does not provide a support for "a storage medium in which ... signals are stored." Applicant's arguments filed December 12/13/07 have been fully considered but they are not deemed to be persuasive. Applicant argues that "control signals" correspond to the "control program 7" and that the "control program 7 is stored in a storage medium 81 for example a CD ROM or a floppy disc. But Applicant clearly claims "a storage medium in which signals are stored," which is clearly different from "a storage medium in which a control program are stored," and the control program corresponds to control signals.

In claim 17, the disclosure does not provide a support for "a computer program product having ... program code". The claimed "computer program product" has not been positively defined in the Disclosure.

In claim 19, the Disclosure does not positively provide the support of how a computer is programmed to perform the claimed step.

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 16-19 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 16 claims "storage medium in which signals are stored" which are a form of energy and not "tangible, and concretely" embedded into a memory; therefore it is not statutory under 35 USC 101.

Claim 17 claims "a computer program product" which, without any support from the disclosure, seems to be "a computer program" per se, which is neither computer components nor statutory process. See Lowry, 32 F.3d at 1583-84, 32 USPQ2d at 1035. The claim can be amended to claim "a computer readable medium in which the computer codes are stored, the computer codes are executed by a computer to perform the steps of:"

Claim 18 claim a computer program per se, which is neither computer components nor statutory process. See Lowry, 32 F.3d at 1583-84, 32 USPQ2d at 1035. The claim can be amended to claim "a computer readable medium in which the computer codes are stored, the computer codes are executed by a computer to perform the steps of:"

Claim 19 claims "a computer executes a program" which is just a software implemented system, and non-statutory under 35 USC 101.

Claims 1, 5-15, 20-25 are allowed.

Due to new rejection on claim 19 under 35 USC 101, this action has been made Non_Final.
